

Egelabra 36th Annual On-property Ram Sale Wednesday 9 October 2019

Open for inspection: 9:30am - Sale commences: 1:00pm

Welcome

Our 36th Annual Egelabra Ram Sale will be held at the Warren Racecourse, Canonbar Road Warren on Wednesday the 9th of October 2019.

We welcome all visitors, returning clients, interested merino breeders and new clients. It certainly has been a challenging time for all and it is industry days such as this that provides a place for us to come together, discuss the past and plan for the future and hope and pray that this devastating drought is coming to an end soon. Times such as these the Merino operation really shines with the ability to recover quickly after prolonged dry times.

We look forward to presenting to you the 2018 Jul/Aug drop sale rams. To date they have not been grain fed but have had the luxury of some irrigated oats, quality hay and mineral lick. They would normally be grazed on natural pastures but due to seasonal conditions they have been in a more intensive situation. The wool has withstood endless days of dust, bouncing off the skin with our traditional bright white wool.

Offering 8 specially selected March shorn rams and 138 April shorn grassfed rams averaging 78kg (no grain). The draft averages: 19.6 for micron, 31mm eye muscle area with 3.5mm of fat.

The rams have been visually scrutinised first before any figures are assessed and have been indexed both for Merino production and Merino dual purpose through Ram Power, allowing you to see our top performers within the group.

Our breeding objectives are to breed an optimum frame ewe that is robust adapting to these tougher times, require minimum inputs and maintaining fleece weight.

Restocking will be the key after the break and we at Egelabra have one of the largest client bases and networks within one bloodline and are only too happy to help you rebuild to full production. So, please do not hesitate to call either Paul Kelly or myself.

Rams will be penned on the day at 9.30am for inspection. Earlier inspections are welcome.

Thank you to all our clients and I hope the sky opens up soon.

Cam Munro

YELLOW SYN	(Yellow Button)	Mixed age special stud ewes by maiden special sire syndicate
EE2/EE3		Mixed age special stud ewes by special sire syndicate
EG		General sire

Egelabra 36th Annual On-property Ram Sale Wednesday 9 October 2019

Open for inspection: 9:30am - Sale commences: 1:00pm

**The following conditions shall apply to all rams sold by
H E Kater & Son Pastoral Co Pty Ltd (Egelabra).**

RETENTION OF HALF SEMEN SALE PROCEEDS

- 1) In the event that the buyer elects to market semen from the ram purchased, the buyer shall account and pay to the seller one half of the net proceeds there from.**
- 2) The buyer shall not market semen from the ram purchased, other than on terms consistent with industry practices, without the consent of the seller.**
- 3) The buyer shall not sell or assign any interest in the ram purchased without first ensuring that the purchaser entered into a Deed of Covenant with the seller binding the purchaser to the seller in the manner stated in conditions 1 and 2.**

Measurement clarification

Fibre Diameter (Micron)	Fibre diameter will be presented as the actual micron on each individual ram. Tests were taken from the mid-side on 6 August 2019.
Standard Deviation (SD)	A measure (in microns) either side of the mean fibre diameter in which 68% of fibres lie.
Co-efficient of Variation (CV)	Measures the spread of fibre diameter variation relative to the average. It is calculated by dividing the standard deviation (SD) by the mean fibre diameter then multiplying by 100.
Comfort Factor (CF)	The percentage of fibres less than 30 microns in a sample, ie: 100% Comfort Factor = 0% of fibres greater than 30 microns.
Greasy Fleece Weight (GFW%)	The yearling fleece weight measured as a percentage.
Eye Muscle Depth (EMD)	The depth of the eye muscle, measured at the C site (45mm from centre of the spine).
Fat Depth	The measurement of fat depth at the C Depth. A deeper measurement indicates a fatter carcase.
Weight	Body Weight recorded 05 September 2019.
Ram Power Indexes	<p>The Ram Power Indexes displayed rank the male progeny of the 2018 drop at Egelabra for the two indexes described below. These are within flock rankings based on measured trait performance including, Yearling and Hogget Body Weight, Fleece Weight, Fibre Diameter, FD CV and FD SD. Visual assessment and individual trait performance must be considered in conjunction with the index.</p> <p>A value of 100 is the median or middle of the drop. A value of 120 is 20% better, while 80 is 20% below the median.</p>
Ram Power Merino MP+ Index	This index is suited to a self-replacing Merino production system. Surplus progeny are sold as hoggets after shearing. Expected responses to MP selection are moderate increases in body weight and fleece weight and reduction of fibre diameter.
Ram Power Merino DP+ Index	This index suites a meat focused or dual-purpose operation. Surplus progeny are sold as lambs and a portion of ewes are joined to terminal sires. Expected responses to DP selection are large increases in body weight, while maintaining fibre diameter.
